## List of tables

---

|                                                             |    |
|-------------------------------------------------------------|----|
| Table 1                                                     |    |
| Line card characteristics . . . . .                         | 7  |
| Table 2                                                     |    |
| Differences between PE and IPE modules . . . . .            | 16 |
| Table 3                                                     |    |
| Line unit address decoding . . . . .                        | 25 |
| Table 4                                                     |    |
| Loop Start Call Processing A/B Bit Settings . . . . .       | 44 |
| Table 5                                                     |    |
| Ground Start Call Processing A/B Bit Settings . . . . .     | 47 |
| Table 6                                                     |    |
| Line protection device ordering information . . . . .       | 50 |
| Table 7                                                     |    |
| OPS analog line card—electrical characteristics . . . . .   | 60 |
| Table 8                                                     |    |
| OPS analog line card—power requirements . . . . .           | 61 |
| Table 9                                                     |    |
| OPS analog line card—ringer limitations . . . . .           | 62 |
| Table 10                                                    |    |
| OPS analog line card—environmental specifications . . . . . | 62 |
| Table 11                                                    |    |
| OPS analog line card—backplane pinouts . . . . .            | 63 |
| Table 12                                                    |    |
| OPS analog line card—configuration . . . . .                | 66 |

|                                                                                                |     |
|------------------------------------------------------------------------------------------------|-----|
| Table 13                                                                                       |     |
| OPS analog line card—cable loop resistance and loss . . . . .                                  | 68  |
| Table 14                                                                                       |     |
| Line-side T1 card LED operation . . . . .                                                      | 76  |
| Table 15                                                                                       |     |
| Line-side T1 card—line interface unit electrical characteristics . . . . .                     | 85  |
| Table 16                                                                                       |     |
| Line-side T1 card—power required . . . . .                                                     | 85  |
| Table 17                                                                                       |     |
| Line-side T1 card—environmental specifications . . . . .                                       | 86  |
| Table 18                                                                                       |     |
| Line-side T1 card—T1 Switch 1 (S1) dip switch settings . . . . .                               | 91  |
| Table 19                                                                                       |     |
| Line-side T1 card—XPEC address dip switch settings (Switch S1, positions 3–6) . . . . .        | 92  |
| Table 20                                                                                       |     |
| Line-side T1 card—T1 Switch 2 (S2) dip switch settings . . . . .                               | 93  |
| Table 21                                                                                       |     |
| Line-side T1 card—CPE or CSU distance dip switch settings (Switch S2, positions 3–5) . . . . . | 93  |
| Table 22                                                                                       |     |
| Line-side T1 card—NT8D11 CE/PE Module vintage level port cabling                               | 94  |
| Table 23                                                                                       |     |
| Line-side T1 card—NT8D37 IPE Module vintage level port cabling .                               | 95  |
| Table 24                                                                                       |     |
| Line-side T1 card—backplane pinouts . . . . .                                                  | 101 |
| Table 25                                                                                       |     |
| Line-side T1 card—NT5D13AA Connector pinouts . . . . .                                         | 102 |
| Table 26                                                                                       |     |
| DX-30 to T1 time slot mapping . . . . .                                                        | 107 |
| Table 27                                                                                       |     |
| MMI commands and command sets . . . . .                                                        | 113 |

---

|                                                                                              |     |
|----------------------------------------------------------------------------------------------|-----|
| Table 28                                                                                     |     |
| T1 bit error rate threshold settings . . . . .                                               | 115 |
| Table 29                                                                                     |     |
| Set alarm options . . . . .                                                                  | 117 |
| Table 30                                                                                     |     |
| MMI Tests . . . . .                                                                          | 124 |
| Table 31                                                                                     |     |
| Time slot mapping . . . . .                                                                  | 133 |
| Table 32                                                                                     |     |
| CLASS modem card—data transmission electrical characteristics . . .                          | 135 |
| Table 33                                                                                     |     |
| CLASS modem card—environmental specifications . . . . .                                      | 135 |
| Table 34                                                                                     |     |
| Digital line card—line interface unit electrical characteristics . . . . .                   | 144 |
| Table 35                                                                                     |     |
| Digital line card—power required . . . . .                                                   | 145 |
| Table 36                                                                                     |     |
| Digital line card—environmental specifications . . . . .                                     | 146 |
| Table 37                                                                                     |     |
| Digital line card—backplane pinouts . . . . .                                                | 148 |
| Table 38                                                                                     |     |
| Analog message waiting line card—line interface unit electrical<br>characteristics . . . . . | 158 |
| Table 39                                                                                     |     |
| Analog message waiting line card—frequency response . . . . .                                | 159 |
| Table 40                                                                                     |     |
| Analog message waiting line card—power requirements . . . . .                                | 160 |
| Table 41                                                                                     |     |
| Analog message waiting line card—environmental specifications . . .                          | 161 |
| Table 42                                                                                     |     |
| Analog message waiting line card—backplane pinouts . . . . .                                 | 164 |

|                                                                                    |     |
|------------------------------------------------------------------------------------|-----|
| Table 43                                                                           |     |
| Transmission Profile Changes .....                                                 | 165 |
| Table 44                                                                           |     |
| OPX analog line card—switchable pad gain settings .....                            | 170 |
| Table 45                                                                           |     |
| OPX analog line card—line interface unit electrical characteristics ..             | 171 |
| Table 46                                                                           |     |
| OPX analog line card—power requirements .....                                      | 172 |
| Table 47                                                                           |     |
| OPX analog line card—environmental specifications .....                            | 173 |
| Table 48                                                                           |     |
| OPX analog line card—backplane pinouts .....                                       | 174 |
| Table 49                                                                           |     |
| Basic 500/2500 analog line card—line interface electrical characteristics          | 183 |
| Table 50                                                                           |     |
| Basic 500/2500 analog line card—maximum number of voice calls<br>recommended ..... | 184 |
| Table 51                                                                           |     |
| Basic 500/2500 analog line card—power requirements .....                           | 184 |
| Table 52                                                                           |     |
| Basic 500/2500 analog line card—environmental specifications ....                  | 185 |
| Table 53                                                                           |     |
| Basic 500/2500 analog line card—backplane pinouts .....                            | 186 |
| Table 54                                                                           |     |
| Integrated services digital line card—line interface technical summary             | 196 |
| Table 55                                                                           |     |
| Integrated services digital line card—power consumption .....                      | 197 |
| Table 56                                                                           |     |
| Integrated services digital line card—environmental specifications ..              | 198 |
